Transport canada commercial vessel requirements

ecent changes to the Canada Shipping Act have changed some of the definitions that we work from. The changes began in 1998 with amendments to the Canada Shipping Act and continued with the passage of a new Canada Shipping Act in 2001. Over the past months, there has been some confusion over the issue of what constitutes a Commercial Passenger Vessel. I will do my best to help you understand how recent rule changes may affect the status of your boats. The status of boats you rent to your guest is absolutely clear. They drive the boat therefore it is a Pleasure Craft. If the boat requires a “Captain” or if you have a boat that you never allow your guests to operate by themselves, it is a commercial vessel. This could include everything from larger fishing boats that are always driven by your guides or boats that bring your guests to the lodge. Since they are used for commercial purposes and operated by one of your employees, they are not Pleasure Craft, but Commercial Passenger Vessels. These boats should be registered as a Commercial Passenger Vessel. What does this mean to you in practical terms? Life Saving Equipment The most significant immediate impact has to do with the safety equipment required. Unlike Pleasure Craft, which can carry Personal Flotation Devices (PFDs), Commercial Passenger Vessels must carry approved Life Jackets. These are much bulkier and somewhat more expensive than PFDs and operators have expressed concern that they will take up valuable storage space. Re-Registration from Pleasure Craft to Commercial Passenger Vessels Once you have determined which of your boats are Commercial Passenger Vessels, the next step is re-registration. This is voluntary right now and does not cost anything for existing boats, but will cost $50 per boat sometime in the future. It involves applying for a Commercial Small Vessel Licence using a one-page form that is available from Transport Canada. The only real change that you’ll notice is that the letter E in the registration number on your boat will change to a C. New boats will have a CO in front of the numbers and ON, after. Inspections For existing boats under 8.5m in length (approx. 28’) - Other than normal random and planned inspections, there is currently no legal inspection requirement for these boats. Operators can elect to voluntarily participate in the Small Vessel Monitoring and Inspection Program, which involves an initial inspection by Transport Canada and ongoing inspection and documentation by the operator. Although the system is voluntary, some operators may choose to participate for liability reasons, or as a way of demonstrating their safety commitment to guests. For boats between 8.5m and 12m in length (approx. 28’ to 39’) – There is a mandatory first inspection as well as random and planned inspections. Operators must comply with the Small Vessel Monitoring and Inspection Program, which as stated above involves an initial inspection by Transport Canada and ongoing inspection and documentation by the operator. Operator Certificates There is no operator certificate required at this time. However, this is currently under review and may change in the future. Unfortunately, none of the current qualifications seems appropriate. The most basic qualification available right now is the Master Limited. This requires a course that runs several days and is currently available only in southern Ontario. As we have indicated in earlier versions of The Outfitter, if Transport Canada elects to require a certificate, we intend to work with them to help develop an appropriate set of qualifications and put in place an accessible system for delivering the required course. For now, however, operator certification is not a concern. As we indicated in a previous issue of The Outfitter, we are continuing discussions with Transport Canada on several concerns we have. Aside from the cost and bulkiness of the required life jackets, will we find that carrying life jackets (they are not practical to wear) replaces wearing PFDs? If this is the case, will safety be compromised rather than enhanced? There is also the possibility of having certain designated lakes or areas designated as Minor Waters (less than two miles to land), and possibly having the life jacket requirement reduced from a Standard Life Jacket to a Small Vessel Life Jacket. Small Vessel Life Jackets are somewhat less bulky, but still larger and more expensive than PFDs. Some of the newer models are similar to PFD’s with a collar. One operator in Northwestern Ontario has already requested an exemption to allow them to legally carry small vessel life jackets instead of the Standard ones, through Transport Canada’s Thunder Bay office. Your Thoughts? What are your thoughts about these regulations? We intend to continue discussions with Transport Canada, and your comments will help us to request changes that protect the safety of our guests with the least possible cost and inconvenience. This article was taken from pages 18 & 19 of NOTO's "The Outfitter" publication, May/June 2003 Issue number of tourist operators have indicated to us that they have recently received notices from Transport Canada requesting they fill out a Small Vessel Inventory Request for Information. As we have written about in the past, changes to the Canada Shipping Act that were made several years ago have reclassified some boats used in our industry from pleasure craft to small commercial vessels. This request from Transport Canada is intended to help them to understand how many of our boats will now fall under the new small commercial vessel definition. The simplest test of how a boat is classified is to ask who drives the boat. If the business operator or an employee drives the boat, it is a small commercial vessel. Rental boats that are driven only by guests are still classified as pleasure craft. Generally, for the outdoor tourism industry, the boats that are re-classified as small commercial vessels will be any boats that are operated by guides and other “working boats” such as boats used to transport guests or supplies to camp. Boats that have multiple uses, such as those that are sometimes operated by guests and operated by guides at other times would also be treated as small commercial vessels. Once they have completed this inventory, Transport Canada will be starting a process of inspection of small commercial vessels. For most of the boats used in our industry, there are no changes to construction or equipment standards, so they will simply be inspected for conformity to their original pleasure craft standards. There were earlier concerns that Transport Canada would require special training for anyone operating these small commercial vessels. This has now been addressed, and the Pleasure Craft Operator Card will be the accepted qualification. There is also a requirement in the regulation for the carriage of Small Vessel Life Jackets rather than the PFDs that are approved for pleasure craft. However, implementation of this requirement is currently on hold as Transport Canada works on the development of a new, more compact Small Vessel Life Jacket standard. For now, PFDs remain acceptable. NOTO is continuing discussions with Transport Canada regarding simplifying the application of these new regulations. Our arguments led to the acceptance of the Pleasure Craft Operator Card, and we will continue to urge the acceptance of PFDs. We will keep working with Transport Canada to make the inventory, inspection and registration process as simple as possible. Please give the NOTO office a call if you have questions or concerns. Your comments will help us to continue to work with Transport Canada to make the transition to these new regulations as simple and painless as possible. This article was taken from page 16 of NOTO's "The Outfitter" publication, Fall 2007 Issue
